Pyrolytic, Electric or 70L capacity...

What type of oven is best for your home?

Your home is unique to you and your family which means you need to choose the type of oven that best suits your needs. At Parmco, we have a wide range of ovens that perform cooking duties in different ways. But how do you choose the perfect fit? Here are a few helpful tips to explain the different functions performed by different types of ovens, to help you make the best decision for your home.

Pyrolytic

By selecting the Pyrolytic function the oven door locks and temperatures reach up to 450 degrees! All the grease and fat burns to a crisp for you to simply wipe out the inside of the oven. Oven's door may require additional cleaning.

Best thing is, it works on the roasting dishes too.

Electric

Parmco's built-in electric ovens have a full range of cooking functions and temperatures, giving you more control and flexibility.

What's more, all Parmco ovens have an A class energy efficiency!

Featuring triple glazed cool touch door technology, Parmco's oven doors produce low door temperatures making it safe even for the little fingers to touch.

70L capacity

Parmco offer you the option of different oven sizes and capacity's to suit every cooking style. With our 60cm built-in ovens providing a huge 70L usable capacity, you can fit a family size roast or any large dish.

Inbuilt Ovens

Electric

70L capacity ovens

With Parmco's new 60cm built-in ovens providing a huge 70L usable capacity, you can fit a family size roast or any other large dish. Two bright lights combined with the large viewing window on the outer door, allow you to clearly see what's going on in the oven. Finished in a stunning black glass with stainless steel edge, this range creates a classic yet modern design to match your kitchen. Plus, with the touch control panel and easy to read display, you have all functions under your control!

70L Multi-zone oven

Different cooking zones in one oven give you greater flexibility and control when you want it. It's simple: heat only the zone you want – top, bottom, multizone or as one large zone. Each zone is independent of the other, so you can select different functions and temperatures at the same time! Heating only the zone you need is also energy and time efficient!

Pyrolytic Oven

This is the oven you have to have in your kitchen. The PPOV-6S-PYRO-1 in stainless steel is 600mm wide and comes with digital touch display, retractable selector knobs, quadglaze cool touch door and child safety lock. The PPOV-6S-PYRO-1 has ten cooking functions including the pyrolytic cleaning mode. When the pyrolytic function is selected the oven door locks and temperatures reach up to 450 degrees! All the grease and fats burn to a crisp for you to simply wipe the inside of the oven.

Inbuilt Ovens

All Parmco ovens offer precise cooking control with excellent multi-functions, including fan forced, grilling and even catalytic self clean panels on selected models.

And more importantly, **all Parmco ovens have an A class energy efficiency.**

What is European A-Level energy efficiency?

The European Energy Efficiency of the appliance is rated in terms of a set of energy efficiency classes from A to G, A being the most energy efficient, G the least efficient. This means that the appliance is using less energy to provide the same level of performance. All Parmco ovens have an A class energy efficiency. This is achieved by a new insulation system which ensures that the heat is kept in the oven. It also avoids overheating of the external surfaces, giving the ovens the extra benefit of having cool touch doors.

Induction, Electric or Gas...

What type of cooktop is best for your home?

Your home is unique to you and your family which means you need to choose the type of cooktop that best suits your needs. At Parmco, we have a wide range of cooktops that perform cooking duties in different ways. But how do you choose the perfect fit? Here are a few helpful tips to explain the different functions performed by different types of cooktops, to help you make the best decision for your home.

Induction

An induction cooktop works by using magnetic energy to heat the pot or pan, put simply - the pot is the element.

Induction cooking provides very fast heat up, precise heat control and very efficient energy consumption.

The latest technology of zoneless induction cooking allows you to place pots of various sizes anywhere within the zones and the cooktop will automatically recognise the pot.

Electric

Parmco's electric cooktops are easy to use and clean.

Featuring two or four elements, including a rapid heat element marked by a red spot, the cooktop gives you great control in selecting a cooking temperature suitable for all types of cooking.

Gas

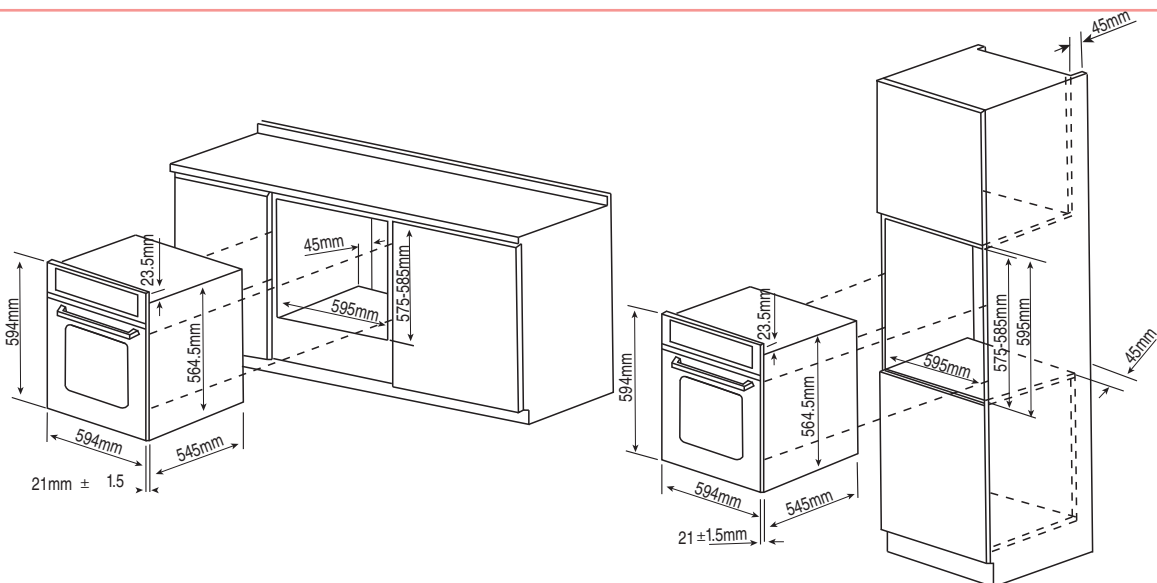

With a sleek stainless steel design combined with durable cast iron trivets, a gas cooktop is suitable even for the most passionate cooks.

With two, four and five powerful burners including wok burner, you have the convenience of selecting a slow simmer or a powerful setting for stir-fries and steaks.
